ECONOMIC GROWTH

“As there is no other truth as overwhelming, no other religion as binding, no other discipline as self evident, it’s scandalous that there still exist things outside the mercy of economic principles.” Peter Hassler

Economic growth is not a contemporary phenomenon, it has been around us for thousands of years, perhaps even before our species conquered the world. The World Equivalence and Growth Organization has ordered this research to get concrete material to support their claim that economic growth is the only way to purify humankind. As long as we have limits and regulations in economical transaction, there will not be peace on earth.

The world wide research begins in Portugal in the year 2011. WEGO has chosen Mind Less Research International to carry out the research in Europe. The organization is aiming to release a global scale of value to measure equivalence concerning human organisms. The definition is based on the WEGO standard (Global economic standard). We want to help the global community of economic growth to avoid any moral contradictions during all transaction.

- Don't underprice your smile, don't overprice your labour

The Equivalence and Growth Organization
